Natural Gas (NG) Breaking 2 Month Downchannel Resistance

Natural Gas (NG) is consolidating after yesterday's US morning surge above triangle resistance (on the daily chart). Significantly, NG has broken above the weekly chart downchannel resistance, dramatically increasing the likelihood of a retest of the 50% Fib retrace of the slide from late February the balance of this month. Although volatility can be expected following Thursday's highly anticipated weekly storage data, any post-data dip is unlikely to retest last week's low. **Congratulations to Premium Members who profited from the opportunities highlighted April 1st, April 17th and reiterated Aug 3rd before the day's historic gains.** The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking at entering long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Join the world's largest asset manager and 2 of the world's 5 largest (and 5 of the 10 largest) hedge funds by AUM as daily readers of Tradable Patterns' technical analysis. Natural Gas (NG) Weekly/Daily/4hr

Silver (SI) Weekly/Daily/4hr

Silver (SI) is consolidating yesterday's bounce going into today's European morning, hesitating as it bumps up against downchannel resistance (on the daily chart). Significantly, SI has been trying these past few weeks to bounce off ascending triangle support (on the weekly chart), staving off for now what was increasingly resembling in March a Double Top (on the weekly chart). Before bulls get excited, they'll want to first see SI close on a daily basis above the daily chart downchannel resistance and then reclaim the March high. [Congratulations to readers who heeded the warning August 5th of SI's overbought conditions](#) and to [the December 16th alert to SI's breakout above its daily chart downchannel resistance](#). Except for the weekly MACD which still slopes down, the weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Tradable Patterns publishes 4 newsletters: **Today's Top 3 Trades, Equities & ETFs, Coffee Daily** and **Crypto Weekly Outlook**.

Arabica Coffee (KC) Weekly/Daily/4hr

Arabica Coffee (KC) rallied more than 1.5% yesterday, breaking out of a 4 day consolidation and closing at downchannel resistance (on the daily chart). Significantly, KC pushed higher yesterday after successfully testing the 38.2% Fib retrace of the November to February rally extension, breaking above the psychologically key 1.30 whole figure level (on the July contract). With KC's slide since late February over, odds are moderately high for a test of the February high before month end. [Congratulations to readers who benefited from the July 24th report highlighting the growing momentum behind KC's major bottoming efforts](#) and again on [Nov 13th](#). The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am long the July contract at 1.316 as of yesterday, although if I were flat I'd look at entering long in the green zone of the daily chart (in the ~1.28-1.315 range), targeting the red zone (of the daily chart in the ~1.34-1.375 range) for Tuesday. The amber/yellow zone (in the ~1.25-1.275 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Equities & ETFs is an Entries/Exits service inspired by technical analysis on a collection of equities and ETFs. I look to explore new long/short trade ideas on Equities & ETFs with Premium Members with a target of 5 multi-week to multi-month swing trades each month. Premium Members also have access to monthly and weekly chart technical analysis for 5 Equity/ETF markets each Saturday.

Coffee Daily

Robusta Coffee (RC) Weekly/Daily/Intra
 Robusta Coffee (RC) surged another 2% plus yesterday, closing at uptempered resistance (on the fib chart). Significantly, RC has decisively broken above horizontal resistance (defined on the weekly chart by the October 2019 low), and is suddenly within a week or so's validity of directional resistance (on the weekly chart). Nevertheless, after the powerful bounce in the past few weeks, RC has limited upside potential in the next few days as it bumps up against uptempered resistance (on the daily chart). Longer term bulls will accumulate on any notable dips the balance of this week with anticipation rising for a potential break (in the September contract) of the weekly chart's directional resistance. Regardless of any profit-taking these next few days, RC has now formed a higher daily high versus the low high, with a higher July low (versus the June low) all but certain. The weekly, daily and 4hr RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at going long in the green zone (of the daily chart in the ~1200-1300 range), targeting the red zone for Tuesday (in the ~1310-1330 range). The amber/yellow zone (in the ~1245-1265 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Arabica Coffee (AC) Weekly/Daily/Intra
 Arabica Coffee (AC) rebounded more than 2% yesterday, closing just shy of down-trend/wedge resistance (on the daily chart). Significantly, AC closed back above the psychological key 1 whole figure level, and is now retesting the horizontal resistance (on the weekly chart) defined by the May 2019 low, and retested last August, October and February 2020. A weekly close above this horizontal resistance will coincide or be followed in the few days after with a reclamation of the July high and a reset of the weekly chart's descending wedge resistance. Oils are suddenly rising for a reset of the 2020 high before year-end (although unlikely with the September contract). The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am flat after profitably closing long yesterday and am looking at re-entering long in the green zone (of the daily chart in the ~1200-1220 range), targeting the red zone (of the daily chart in the ~1245-1265 range) for Tuesday. The amber/yellow zone (in the ~1210-1230 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
