

# CRYPTO WEEKLY OUTLOOK

Jan 23, 2022

A new format for Crypto Weekly Outlook is taking form, where in light of the rapidly emerging and evolving opportunities in other top 50 coins (other than Bitcoin, Ethereum and Ripple), Crypto Weekly Outlook will 3 Sundays out of each month, provide technical analysis on 10 coins from the top 50 (in market cap) which appear the most interesting for the coming week. Only coins that have above average fundamentals over the long run will be selected. Once a month on every 4<sup>th</sup> Sunday, coverage of Ethereum (ETHUSD), Bitcoin (BTCUSD) and industry fundamentals will continue in a similar format to that available up until November 28, with the coverage on Ripple (XRPUSD) being swapped out for technical analysis on 3 coins selected from the top 50 market cap list. As some of the market fundamentals for Ethereum, Bitcoin and the crypto industry do not necessarily dramatically change week to week, it is probably more interesting to provide technical analysis on coins that offer the most tremendous long term growth opportunities within more scalable blockchains, DeFi, NFTs and GameFi.

## Natural Gas (NG) Breaking 2 Month Downchannel Resistance

Natural Gas (NG) is consolidating after yesterday's US morning surge above triangle resistance (on the daily chart). Significantly, NG has broken above the weekly chart downchannel resistance, dramatically increasing the likelihood of a retest of the 50% Fib retrace of the slide from late February the balance of this month. Although volatility can be expected following Thursday's highly anticipated weekly storage data, any post-data dip is unlikely to retest last week's low. **Congratulations to Premium Members who profited from the opportunities highlighted April 1st, April 17th and reiterated Aug 3rd before the day's historic gains.** The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking at entering long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

## Robusta Coffee (RC) Weekly/Daily/4hr

Robusta Coffee (RC) consolidated again yesterday, forming a 2<sup>nd</sup> daily Doji/Gravestone and advancing in the weekly Gravestone just above the March low. Significantly, RC will need to close on a weekly basis above the 50% Fib retrace of the July to September rally to all but halt the massive slide since late February. Before bulls get excited though, they'll want to see a daily close above prior triangle resistance (on the daily chart) which will dramatically increase the odds of a test of triangle resistance (on the weekly chart) in the several days after. The odds for a retest this week of the 2021 low coinciding with the psychologically key 1300 whole figure level is moderately low. The weekly and daily RSI, Stochastics and MACD are mostly bottomish. I am long as of yesterday at 1345, although if I were flat, I'd look to enter long in the green zone of the daily chart (in the ~1315-1340 range), targeting the red zone (of the daily chart in the ~1375-1400 range) for Tuesday. The amber/yellow zone (in the ~1280-1310 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
