TODAY'S TOP 3 TRADES

Feb 9, 2022

METALS/ENERGY (GOLD, NATURAL GAS) + TODAY'S TOP TRADE (AUDUSD) GOLD (GC)

Gold (GC) appears ready for consolidation in the next day or so after the strong bounce this past week off the psychologically key 1800 whole figure level. Significantly, GC has rebounded off triangle support (on the weekly chart), with a decent likelihood of completing this triangle by month end. With GC back above the 61.8% Fib retrace of the January high to low slide, the odds of GC retesting the January high in February is now dramatically higher. Any deeper profittaking triggered by Thursday's US CPI data is unlikely to see GC slide back to upchannel support (on the 4hr chart). By going to tradingview.com, GC can be seen bouncing off triangle support (connecting the 2018, 2019 and 2020 lows, and nearing triangle completion. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish or rallying. I am flat after profitably closing longs yesterday and am looking to re-enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

NATURAL GAS (NG)

Natural Gas (NG) is trying to firm after the sharp selloff from the February high. Significantly, if NG finds support this week at its current 61.8% Fib retrace of the January-February rally, NG will all but have formed a higher February low versus the January low, reinforcing the higher February high versus the January high. Nevertheless, with the immense volatility typically accompanying Thursday's highly anticipated weekly storage data, odds are decent for NG to test the psychologically key 4 whole figure level by the weekend. Congratulations to Premium Members who benefited from the opportunities highlighted [Jan 19, 2022](#), [Jan 27, 2021](#) and [April 14, 2021](#). The tiring weekly RSI and Stochastics are weighing on the weekly MACD which is trying to positively cross. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Weekly/Daily/4hr

SINGAPOREFINTECH

AUDUSD

The AUDUSD is gaining for a 3rd straight day, testing the February high. Significantly, the AUDUSD is bouncing off the psychologically key 0.70 whole figure level, with the January low only slightly lower than the December low. A daily close above the January high would dramatically increase odds for a test of the weekly chart downtrend resistance in the week after. Although the 4hr chart ascending triangle is likely to resolve upwards today, any further upside to the January high will have to wait until after RBA governor Lowe speaks Friday. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to go long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

CRYPTO WEEKLY OUTLOOK

Sample Report from Nov 28, 2021 right before a deepening in the crypto market correction.

CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

Robusta Coffee (RC) Weekly/Daily/4hr

Robusta Coffee (RC) consolidated again yesterday, forming a 2nd daily Doji/Gravestone and advancing in the weekly Gravestone just above the March low. Significantly, RC will need to close on a weekly basis above the 50% Fib retrace of the July to September rally to all but halt the massive slide since late February. Before bulls get excited though, they'll want to see a daily close above prior triangle resistance (on the daily chart) which will dramatically increase the odds of a test of triangle resistance (on the weekly chart) in the several days after. The odds for a retest this week of the 2021 low coinciding with the psychologically key 1300 whole figure level is moderately low. The weekly and daily RSI, Stochastics and MACD are mostly bottomish. I am long as of yesterday at 1345, although if I were flat, I'd look to enter long in the green zone of the daily chart (in the ~1315-1340 range), targeting the red zone (of the daily chart in the ~1375-1400 range) for Tuesday. The amber/yellow zone (in the ~1280-1310 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
