TODAY'S TOP 3 TRADES

Mar 16, 2022

METALS/ENERGY (NATURAL GAS, WTI CRUDE) + TODAY'S TOP TRADE (VIX) NATURAL GAS (NG)

Natural Gas (NG) is trying to edge higher going into today's European morning as it breaks above a descending triangle resistance (on the 4hr chart). Significantly, NG is trying to bounce off the psychologically key 4.5 whole figure level and the 38.2% Fib retrace of the January to March bull market extension. Nevertheless, any further progress on a Ukraine ceasefire along with higher than expected weekly storage data on Thursday could suddenly see NG back to the March low. Congratulations to Premium Members who benefited from the opportunities highlighted [Jan 19, 2022](#), [Jan 27, 2021](#) and [April 14, 2021](#). The weekly, daily and 4hr RSI, Stochastics and MACD are mostly bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

WTI CRUDE (CL)

WTI Crude (CL) is firming in today's Asia morning, making early efforts to halt the deep slide from the March high. Significantly, although CL is back below the psychologically key 100 whole figure level, CL is now testing the 50% Fib retrace of the December to March bull market extension. Nevertheless, odds are roughly equal following today's 1030am EST release of highly anticipated weekly crude oil inventory data for a bullish completion of what appears to be a descending wedge (on the 4hr chart) and alternatively, for a break below triangle support (on the daily chart) to upchannel support (on the weekly chart). [Congratulations to readers who heeded the August 4, 2021 warning of CL's vulnerability](#), and to [Premium Members who benefited from the bullish triangle breakout highlighted Nov 18, 2020](#). The weekly RSI, Stochastics and MACD are tiring or steadily sloping down, weighing on the somewhat bottomish daily RSI and Stochastics. I am looking at entering long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Weekly/Daily/4hr

SINGAPOREFINTECH

VIX (VX)

The VIX (VX) is consolidating in today's Asia morning, looking vulnerable to slipping below the psychologically key 30 whole figure level. Significantly, although the VX appears likely to retest its 2022 high (from last week) before month end, any progress around a Ukraine-Russia ceasefire or today's 2pm EST FOMC and US Fed rate announcement Wednesday could first send the VX sliding back briefly to the 50% Fib retrace of the January-March rally. Also certain to trigger volatility will be today's 830am EST US retail sales data, and Friday's options expiries. [Congratulations to premium subscribers who benefited from the March 17, 2020 warning of the pending slide in the VX, one day before its record high on the front month contract](#), or more recently from the [Nov 30, 2021 alert of the growing probability of a rebound in the VIX](#) and repeated [Jan 18, 2022](#). The weekly RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

Robusta Coffee (RC) Weekly/Daily/4hr

Robusta Coffee (RC) consolidated again yesterday, forming a 2nd daily Doji/Gravestone and advancing in the weekly Gravestone just above the March low. Significantly, RC will need to close on a weekly basis above the 50% Fib retrace of the July to September rally to all but halt the massive slide since late February. Before bulls get excited though, they'll want to see a daily close above prior triangle resistance (on the daily chart) which will dramatically increase the odds of a test of triangle resistance (on the weekly chart) in the several days after. The odds for a retest this week of the 2021 low coinciding with the psychologically key 1300 whole figure level is moderately low. The weekly and daily RSI, Stochastics and MACD are mostly bottomish. I am long as of yesterday at 1345, although if I were flat, I'd look to enter long in the green zone of the daily chart (in the ~1315-1340 range), targeting the red zone (of the daily chart in the ~1375-1400 range), for Tuesday. The amber/yellow zone (in the ~1280-1310 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
