FX (COCOA, RAW SUGAR) + TODAY'S TOP TRADE (GBPUSD) COCOA (CC)

Cocoa (CC) bounced a massive near 3% yesterday, closing just shy of the week's high. CC appears poised to close the week with a weekly Hammer above descending wedge resistance (on the weekly chart). Any weekly close above the psychologically key 2400 whole figure level and 38.2% Fib retrace of the February to September slide will further reinforce the major bottom efforts. Congratulations to readers who benefited from the Aug 9, 2021 alert of CC's increasing bounce momentum, and from the major trend reversal opportunity highlighted Jul 23, 2020 and again on Nov 13, 2020. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Thursday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

RAW SUGAR (SB)

Raw Sugar (SB) pushed higher yesterday, closing at a fresh October high and further breaking downtrend resistance (on the weekly chart). With last week's strong bounce off just above the 2022 low, SB is suddenly just shy of the 50% Fib retrace of the April to September slide. Odds are elevated for SB to complete by year end, the major consolidation since last October (as seen more easily on a monthly chart on tradingview.com). The weekly and daily RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Thursday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

InteractiveBrokers

GBPUSD

The GBPUSD is consolidating after yesterday's roughly 200 pip rally, hesitating as it nears triangle resistance (on the daily chart) and the psychologically key 1.15 whole figure level. Any daily close above the daily chart triangle/downtrend resistance will dramatically increase the odds of breaking the downchannel resistance (on the weekly chart) in the few days after. Bullish catalysts may arrive from today's 830am EST US retail sales and 10am EST preliminary UoM consumer sentiment. The escalation in the Ukraine-Russia conflict deserves close monitoring. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish or consolidating recent gains. I am looking to go long in the green zone (of the daily chart), targeting the red zone for Thursday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. Congratulations to readers alerted August 1st of the completion of the major June-July bottom, and to those who heeded the warning May 16th of the major top forming. The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

COFFEE DAILY

Jan 2, 2022

ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged lower Friday, closing 2021 just below the fresh year high. Significantly, with the new year beginning, odds are high after last year's strong bull market for RC to at least see a healthy correction. RC is bumping up against upchannel resistance (on the weekly chart), with some hesitation late last week as seen by the 2 consecutive daily Dojis. Any test of the psychologically key 2500 whole figure level will likely have to wait until at least February. The weekly and daily RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at entering long in the green zone of the daily chart (in the ~2270-2330 range), targeting the red zone (of the daily chart in the ~2400-2450 range) for Friday. The amber/yellow zone (in the ~2190-2240 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
