

COFFEE DAILY

Oct 12, 2022

ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged higher yesterday, closing just above the daily chart descending wedge support. With RC testing upchannel support (on the weekly chart), RC remains at moderate risk of sliding further this week to the 61.8% Fib retrace of the July to August rally. Any daily close above the daily chart descending wedge resistance by mid week will keep a retest of the 2022 high (formed late August) by November sometime in play. The weekly and daily MACD are sloping down, weighing on the bottomish daily RSI and Stochastics. I am looking at entering long in the green zone of the daily chart (in the ~2070-2130 range), targeting the red zone (of the daily chart in the ~2180-2220 range) for Tuesday. The amber/yellow zone (in the ~2010-2050 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

ARABICA COFFEE (KC)

Arabica Coffee (KC) formed a third straight daily Doji yesterday, nearing completion on the triangle (on the daily chart). KC remains vulnerable to extending its downchannel (on the weekly chart), retesting the 50% Fib retrace of the July to August rally. Any break this week below the September low will dramatically increase odds for a retest in October, of the psychologically key 2 whole figure level. KC will need a daily close above the daily chart triangle resistance to put back into play a completion before year end of the broader Bull Flag consolidation (on the weekly chart) that began in December (and seen more easily on a monthly chart on tradingview.com). The still downsloping weekly and daily MACD are weighing on the bottomish weekly and daily RSI and Stochastics. I am looking at entering long in the green zone of the daily chart (in the ~2.05-2.13 range), targeting the red zone (of the daily chart in the ~2.18-2.26 range) for Tuesday. The amber/yellow zone (in the ~1.95-2.02 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

We use machine learning to create trading signals and generate consistent alpha (market outperformance) since 2020.

Strategies Summary

- 9 active models based on AI/ML
- Trades spot (live since Nov 2020) and futures (in testing, ETA Dec 2022)
- Trades highly liquid markets (BTC, ETH, BNB, etc.)
- Model input: Market data (OHLCV)
- Model output: BUY/SELL/HOLD + % portfolio
- Trade frequency: 4-10 trades per week (8-10x AUM/mo)

Technology Summary

- Developed in-house, proprietary
- Not a rule-based algo
- Cutting edge neural network architectures (LSTM, GRU, Performer (Transformer), GMLP, Filter)
- Self-learning and adaptive (uses reinforcement learning)
- Scalable to other markets
- Difficult to replicate

TODAY'S TOP 3 TRADES

Jan 19, 2022

METALS/ENERGY (NATURAL GAS, SILVER) + TODAY'S TOP TRADE (VIX)

Natural Gas (NG)

Natural Gas (NG) is trying to bounce off uptrend support (on the 4hr chart) in today's Asia morning, making progress in recovering after Thursday's strong profit-taking. Significantly, NG is extending Friday's rebound from just above the psychologically key 4 whole figure level, with the catalyst for testing triangle resistance (on the daily chart) coming as early as Thursday's highly anticipated weekly storage data. With NG comfortably above the 50% Fib retrace of the entire June 2020 to October 2021 rally (seen on tradingview.com on a monthly chart), NG appears unlikely to retest the December low the balance of January. Congratulations to Premium Members who benefited from the opportunities highlighted [Jan 27th](#) and [April 14th](#). The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

[Sample from report \(Nov 28, 2021\) right before a deepening in the crypto market correction.](#)

CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.
