TODAY'S TOP 3 TRADES

Mar 22, 2023

METALS/ENERGY (GOLD, SILVER) + TODAY'S TOP TRADE (GBPUSD) GOLD (GC)

Gold (GC) slid more than 2% yesterday, completing what appears to be a Bearish Island Reversal (on the daily chart) after forming a fresh 2023 high Monday at upchannel resistance (on the daily and weekly chart). Within GC's current consolidation back below triangle resistance (on the weekly chart), GC is beginning to firm near the 38.2% Fib retrace of the March rally. Nevertheless, GC bulls should be prepared for a moderate probability of breaking upchannel support (on the 4hr and daily chart) with today's highly anticipated FOMC economic projections, statement, Federal Funds rate, and conference. Regardless of a moderate probability of a deeper slide to the 50% Fib of the March rally following Thursday's US unemployment claims or Friday's US Flash Manufacturing PMI and Services PMI, a retest of the psychologically key 2000 whole figure level before month end is roughly equally likely. GC is in the advanced stages of a Bull Flag consolidation since August 2020 (as can be seen more easily on a monthly chart on tradingview.com). [Congratulations to paying subscribers who benefited from the Nov 2, 2022 analysis suggesting that GC was in the early stages of forming a major bottom](#). The weekly and daily RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

SILVER (SI)

Silver (SI) is consolidating after the monster rally from the 2023 low (formed 2 weekly candles ago) around the psychologically key 20 whole figure level, and appears vulnerable to more healthy profit-taking today with the 4hr chart ascending wedge near complete. With SI having on Monday peaked near the 61.8% Fib retrace of the January to March slide, odds are now moderate for a test of triangle resistance (on the weekly chart) by April sometime. Watch for volatility following today's highly anticipated FOMC economic projections, statement, Federal Funds rate, and conference. Cushioning from any deeper profit-taking today could come as early as following Thursday's US unemployment claims or Friday's US Flash Manufacturing PMI and Services PMI. [Congratulations to paying subscribers who benefited from the Nov 2, 2022 analysis suggesting that SI was in the advanced stages of forming a major bottom](#). The weekly and daily RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Weekly/Daily/4hr

GBPUSD

The GBPUSD is trying to firm after yesterday's healthy consolidation just above downchannel resistance (on the daily chart). The GBPUSD appears less likely to deepen in its profittaking in the next day or so to under uptrend support (on the 4hr chart) to the psychologically key 1.20 whole figure level, than it is to form a fresh 2023 high by month end. Nevertheless, watch for volatility following today's highly anticipated UK CPI at 3am EST, 2pm EST FOMC economic projections, statement, Federal Funds rate, and 230pm EST conference. Cushioning from any deeper profittaking today could come as early as following Thursday's UK MPC official bank rate votes, monetary policy summary and official bank rate, or after the US unemployment claims. Bullish catalysts may arrive Friday after the UK Flash Manufacturing PMI and Flash Services PMI or following the US Flash Manufacturing PMI and Services PMI. The weekly and daily RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to go long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

COFFEE DAILY

Jan 2, 2022

ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged lower Friday, closing 2021 just below the fresh year high. Significantly, with the new year beginning, odds are high after last year's strong bull market for RC to at least see a healthy correction. RC is bumping up against upchannel resistance (on the weekly chart), with some hesitation late last week as seen by the 2 consecutive daily Dojis. Any test of the psychologically key 2500 whole figure level will likely have to wait until at least Feb February. The weekly and daily RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at entering long in the green zone of the daily chart (in the ~2270-2330 range), targeting the red zone (of the daily chart in the ~2400-2450 range) for Friday. The amber/yellow zone (in the ~2190-2240 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
