TODAY'S TOP 3 TRADES

April 5, 2023

METALS/ENERGY (GOLD, SILVER) + TODAY'S TOP TRADE (VIX)

GOLD (GC)

Gold (GC) is consolidating after surging yesterday to upchannel resistance (on the weekly chart) and the April 2022 high (on the June contract). Regardless of any healthy profit-taking ahead of the weekend that brings GC back to the psychologically key 2000 whole figure level, GC remains well positioned in April to retest the record high formed in July 2020. GC is in the advanced stages of a Bull Flag consolidation since August 2020 (as can be seen more easily on a monthly chart on tradingview.com). Watch for volatility today 815am EST with the US ADP non-farm employment change, or the 10am EST US ISM services PMI, and after Thursday's US unemployment claims and Friday's highly anticipated US Non-Farm Payrolls (NFP). [Congratulations to paying subscribers who benefited from the Nov 2, 2022 analysis suggesting that GC was in the early stages of forming a major bottom.](#) The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

SILVER (SI)

Silver (SI) is due for some healthy profittaking after surging yesterday to upchannel resistance (on the 4hr and daily chart). Regardless, with SI's break yesterday above triangle resistance (on the weekly chart) to a fresh 2023 high, SI is likely to test the 2022 high in April. Any consolidation going into next week will see initial support around the psychologically key 25 whole figure level. Watch for volatility today 815am EST with the US ADP non-farm employment change, or the 10am EST US ISM services PMI, and after Thursday's US unemployment claims and Friday's highly anticipated US Non-Farm Payrolls (NFP). [Congratulations to paying subscribers who benefited from the Nov 2, 2022 analysis suggesting that SI was in the advanced stages of forming a major bottom.](#) The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

VIX (VX)

The VIX (VX) is trying to firm after sliding all the way back to the 2023 low, vulnerable to briefly breaking ahead of the weekend below the psychologically key 20 whole figure level. The strength of the March surge suggests a higher likelihood of the VX retesting the March high in April than for a sliding all the way to downchannel support (on the weekly chart) in the same period. Either way, before VX bulls get excited, they'll want to see a daily close above the daily chart triangle resistance. Watch for volatility today 815am EST with the US ADP non-farm employment change, or the 10am EST US ISM services PMI, and after Thursday's US unemployment claims and Friday's highly anticipated US Non-Farm Payrolls (NFP). [Congratulations to premium subscribers who benefited from the March 17, 2020 warning of the pending slide in the VX, one day before its record high on the front month contract](#), or more recently from the [Nov 30, 2021 alert of the growing probability of a rebound in the VIX](#) and repeated [Jan 18, 2022](#). The weekly and daily MACD are downsloping, weighing on the somewhat bottomish weekly and daily RSI and Stochastics. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Crypto Weekly Outlook offers technical Analysis for 10 coins from the top 50 in market cap that are most interesting for the coming week from a TA standpoint.

[Sample with Fundamental analysis on ETHUSD, BTCUSD and on the industry from Nov 28, 2021 right before a deepening in the crypto market correction.](#)

CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

COFFEE DAILY

Jan 2, 2022

ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged lower Friday, closing 2021 just below the fresh year high. Significantly, with the new year beginning, odds are high after last year's strong bull market for RC to at least see a healthy correction. RC is bumping up against upchannel resistance (on the weekly chart), with some hesitation late last week as seen by the 2 consecutive daily Dojis. Any test of the psychologically key 2500 whole figure level will likely have to wait until at least February. The weekly and daily RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at entering long in the green zone of the daily chart (in the ~2270-2330 range), targeting the red zone (of the daily chart in the ~2400-2450 range) for Friday. The amber/yellow zone (in the ~2190-2240 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
