TODAY'S TOP 3 TRADES

May 10, 2023

METALS/ENERGY (GOLD, NATURAL GAS) + TODAY'S TOP TRADE (VIX) GOLD (GC)

Gold (GC) is hesitating as it tries reclaiming last week's fresh 2023 high above the 2022 high and just shy of a record high. Regardless though of any deeper consolidation from last Thursday's rejection at upchannel/ascending wedge resistance (on the weekly chart), GC does not appear likely to slide this week to below the psychologically key 2000 whole figure level. With GC's completion of its Bull Flag consolidation since August 2020 (as can be seen more easily on a monthly chart on tradingview.com), GC appears more likely to form a fresh record high in May than it is to slide below the May low. More bullish catalysts may arrive as early as today 830am EST with the US CPI, Thursday after the US PPI and unemployment claims and Friday following the US preliminary UoM consumer sentiment. [Congratulations to paying subscribers who benefited from the Nov 2, 2022 analysis suggesting that GC was in the early stages of forming a major bottom.](#) The weekly and daily RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Join the world's largest asset manager and 2 of the world's 5 largest (and 5 of the 10 largest) hedge funds by AUM as daily readers of [Tradable Patterns' technical analysis](#). NATURAL GAS (NG)

Natural Gas (NG) is consolidating after the bounce that began Friday off downchannel support (on the weekly chart). NG is once again attempting a major bottoming effort, with any daily close this week above the psychologically key 2.5 whole figure level and daily chart downchannel/descending wedge resistance dramatically increasing the likelihood of breaking above the April high in May. Before bulls get excited, NG will need to reclaim the March high. Congratulations to Premium Members who benefited from the opportunities highlighted [Jan 19, 2022](#), [Jan 27, 2021](#) and [April 14, 2021](#). The weekly and daily RSI, Stochastics and MACD are bottomish. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Weekly/Daily/4hr

VIX (VX)

The VIX (VX) is continuing to make another effort at a major bottom, trying to hold above the fresh 2023 low formed with last week's weekly candle. Any daily close above downchannel resistance (on the daily chart) will dramatically increase the likelihood of a test of the psychologically key 25 whole figure level in May. With the VX's 1st green weekly candle in 7 weeks last week, the VX no longer appears likely to form a lower 2023 low in May. Short covering may occur as early as today 830am EST with the US CPI, Thursday after the US PPI and unemployment claims and Friday following the US preliminary UoM consumer sentiment. [Congratulations to premium subscribers who benefited from the March 17, 2020 warning of the pending slide in the VX, one day before its record high on the front month contract](#), or more recently from the [Nov 30, 2021 alert of the growing probability of a rebound in the VIX](#) and repeated [Jan 18, 2022](#). The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

COFFEE DAILY

Jan 2, 2022

ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged lower Friday, closing 2021 just below the fresh year high. Significantly, with the new year beginning, odds are high after last year's strong bull market for RC to at least see a healthy correction. RC is bumping up against upchannel resistance (on the weekly chart), with some hesitation late last week as seen by the 2 consecutive daily Dojis. Any test of the psychologically key 2500 whole figure level will likely have to wait until at least Feb February. The weekly and daily RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at entering long in the green zone of the daily chart (in the ~2270-2330 range), targeting the red zone (of the daily chart in the ~2400-2450 range) for Friday. The amber/yellow zone (in the ~2190-2240 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
