# COFFEE DAILY

May 11, 2023

## ROBUSTA COFFEE (RC)

Robusta Coffee (RC) bounced higher yesterday off upchannel support (on the daily chart). RC suddenly appears likely before the weekend to form a fresh 2023 high, test the psychologically key 2500 whole figure level, and complete its 8<sup>th</sup> straight green weekly candle. With the massive Bull Flag consolidation since late 2021 (seen easier on a monthly chart on [tradingview.com](https://tradingview.com)) resolving higher, odds are decent for a test of the weekly chart upchannel resistance sometime in May. Any test of the 2011 high (formed in that March) will likely have to wait until at least June sometime. The weekly, daily and 4hr RSI, Stochastics and MACD are rallying or bottomish, but weighed on by the overbought weekly RSI and Stochastics. I am looking at entering long in the green zone of the daily chart (in the ~2390-2470 range), targeting the red zone (of the daily chart in the ~2530-2620 range) for Wednesday. The amber/yellow zone (in the ~2270-2360 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

## ARABICA COFFEE (KC)

Arabica Coffee (KC) edged lower yesterday, closing just below the 4hr chart downchannel resistance. RC is once again somewhat vulnerable to extending the slide since the April high. Any break above the May high would dramatically increase the likelihood of reclaiming the psychologically key 2 whole figure level sometime in May, and greatly reduce the chance of testing the weekly chart upchannel support in the same period. Except for the still downsloping weekly Stochastics, the weekly and daily RSI, Stochastics and MACD are bottomish. I am looking at entering long in the green zone of the daily chart (in the ~1.74-1.83 range), targeting the red zone (of the daily chart in the ~1.90-1.98 range) for Wednesday. The amber/yellow zone (in the ~1.65-1.73 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

## TODAY'S TOP 3 TRADES

Jan 19, 2022

**METALS/ENERGY (NATURAL GAS, SILVER) + TODAY'S TOP TRADE (VIX)**

**Natural Gas (NG)**

Natural Gas (NG) is trying to bounce off uptrend support (on the 4hr chart) in today's Asia morning, making progress in recovering after Thursday's strong profittaking. Significantly, NG is extending Friday's rebound from just above the psychologically key 4 whole figure level, with the catalyst for testing triangle resistance (on the daily chart) coming as early as Thursday's highly anticipated weekly storage data. With NG comfortably above the 50% Fib retrace of the entire June 2020 to October 2021 rally (seen on tradingview.com on a monthly chart), NG appears unlikely to retest the December low the balance of January. Congratulations to Premium Members who benefited from the opportunities highlighted [Jan 27th](#) and [April 14th](#). The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

## CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

### ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.
