May 25, 2023

## FX (USDCHF, USDCAD) + TODAY'S TOP TRADE (S&P500)

### USDCHF

The USDCHF is consolidating after surging from Monday's low, hesitating at triangle resistance (on the daily chart) and digesting this week's break above descending wedge resistance (on the weekly chart). With the USDCHF comfortably above the psychologically key 0.90 whole figure level, odds are decent for renewed momentum next week in the bounce off the 2023 low and the weekly chart descending wedge support. Further short covering may be triggered by today's 830am EST US GDP and unemployment claims, and Friday's US core PCE price index change. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to go long in the green zone (of the daily chart), targeting the red zone for Wednesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

## USDCAD

The USDCAD is consolidating after surging yesterday from the psychologically key 1.35 whole figure level. Odds are decent for renewed momentum by next week in its bounce off the 2023 low, nearing completion in its triangle (on the weekly chart) which is arguably a Bull Flag consolidation (as can be seen easier on a monthly chart on [tradingview.com](https://tradingview.com)). Further bullish catalysts may arrive with today's 830am EST US GDP and unemployment claims, and Friday's US core PCE price index change. The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am looking to enter long in the green zone (of the daily chart), targeting the red zone for Wednesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

### Weekly/Daily/4hr

## S&P500 (ES)

The S&P500 (ES) is trying to firm after 2 strong down days from near Friday's fresh 2023 high, but remains vulnerable to more weakness ahead of the weekend. The red weekly Doji trying to complete near triangle resistance (on the weekly chart) suggests hesitation in joining the Nasdaq100 (NQ) in gravitating to the 61.8% Fib retrace of the slide from the January 2022 high to October 2022 low (as can be seen more easily on a weekly chart on [tradingview.com](https://tradingview.com)). Any break below the May low will dramatically increase the likelihood of sliding below the psychologically key 4k whole figure level in the few days after. Watch for more volatility with today's 830am EST US GDP and unemployment claims, and Friday's US core PCE price index change. Congratulations to paying subscribers who benefited from [the Oct 18, 2022 analysis highlighting the early stages of a month plus Dead Cat Bounce](#), or from [the February 18, 2020 analysis one day before the record high in the ES, warning of the pending slide in the S&P500](#). The weekly and daily RSI, Stochastics and MACD are tiring or consolidating recent losses. I will likely stay on the sidelines ahead of the weekend but will keep an eye out for a short opportunity once ES breaks below the May low.

[Sample with Fundamental analysis on ETHUSD, BTCUSD and on the industry from Nov 28, 2021 right before a deepening in the crypto market correction.](#)

## CRYPTO WEEKLY OUTLOOK

ETHEREUM + INDUSTRY FUNDAMENTALS + BITCOIN + RIPPLE

### ETHEREUM (ETHUSD)

Nov 28, 2021

Ethereum (ETHUSD) is deepening in its correction, and appears poised to slide further this week. Significantly, ETHUSD is at high risk of exceeding the September pullback in magnitude, following in Bitcoin (BTCUSD)'s footsteps. The current 2 week downturn is testing the psychologically key 4k whole figure level, and appears to be gravitating towards an uptrend support line (on the weekly chart) connecting the July and September lows. Odds are elevated for a test of the 50% Fib retrace of the July to October rally sometime in December. ETHUSD's correlation to BTCUSD (on a weekly chart) is at 0.95, near the upper end of its 5 year range. [Congratulations to readers alerted August 1st of the completion of the major June-July bottom](#), and to those who heeded [the warning May 16th of the major top forming](#). The weekly RSI, Stochastics and MACD are tiring, weighing on the attempting to bottom daily RSI and Stochastics. I am likely going to remain flat this week but would consider going long in the 3000-3300 range, targeting a 3000-4000 range for December.

# COFFEE DAILY

Jan 2, 2022

## ROBUSTA COFFEE (RC)

Robusta Coffee (RC) edged lower Friday, closing 2021 just below the fresh year high. Significantly, with the new year beginning, odds are high after last year's strong bull market for RC to at least see a healthy correction. RC is bumping up against upchannel resistance (on the weekly chart), with some hesitation late last week as seen by the 2 consecutive daily Dojis. Any test of the psychologically key 2500 whole figure level will likely have to wait until at least Feb February. The weekly and daily RSI, Stochastics and MACD are rallying or consolidating recent gains. I am looking at entering long in the green zone of the daily chart (in the ~2270-2330 range), targeting the red zone (of the daily chart in the ~2400-2450 range) for Friday. The amber/yellow zone (in the ~2190-2240 range) is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).
